AP Microeconomics Score Calculator

Choose your test form, enter rubric points, and see the calculation. The named historical or publisher mode includes its exact1–5 conversion; the 2027 mode shows a weighted practice composite.

May 2027 format: weighted practice composite

Applies the published section weights to practice points. This mode returns a weighted practice composite, not a predicted AP 1–5 grade.

Input	Allowed values	Example	Your score
Multiple choice correct	0 to 60	42	_____
Long FRQ	0 to 10	7	_____
Short FRQ 1	0 to 5	4	_____
Short FRQ 2	0 to 5	3	_____

Calculation

66.65*mcq/60 + 33.35*(long+short1+short2)/20

Worked example

The example gives 70.0000/100 before display rounding. It does not establish an AP 1–5 result; a score conversion requires a matched test form and conversion table.

College Board 2012 public practice exam, FormI - exact form only

Use only after scoring this exact practice test with its own answer key and rubrics. This conversion is not the current official exam curve.

Input	Allowed values	Example	Your score
2012 MCQ correct	0 to 60	42	_____
2012 FRQ 1	0 to 10	7	_____
2012 FRQ 2	0 to 6	4	_____
2012 FRQ 3	0 to 5	3	_____

Calculation

mcq + 1.5*q1 + 1.25*q2 + 1.5*q3

Worked example

Using the printed coefficients gives 62.0000; round only the final total to 62. The matching conversion table gives AP 4 for this form.
